RE: Contract Performance and Completion, City of Huntington Beach

Dear Mr. Clayton:

I want to acknowledge that Clayton Engineering, Inc. (CEI) has successfully performed and completed numerous projects over the years in our City. Several of the most prominent projects were the Ellis Ave. Roadway Improvements between Gothard Ave. and Goldenwest Street, the Main Street Redevelopment Project, Cypress Ave. Residential Street Improvement Project and the largest and most challenging was the 2.2 miles of Pacific Coast Highway Improvements Project between Beach Blvd. and Goldenwest Street.

The general scope of work of these projects consisted of storm drain, sewer, water, grading and street improvements. The value of these projects ranged between \$250,000.00 and \$2,500,000.00 and required a broad range of heavy civil construction skills. CEI understands the importance of working to optimize coordination between its work, the public and the City to ensure the successful completion of each project. The professional attitude and practices in executing these construction projects promptly and completely was refreshing and appreciated.

Best regards,

Eric R. Charlonne
Construction Manager
